

SERVICE MANUAL

COLOR TELEVISION

NOTICES BEFORE REPAIRING

To make the best use of this equipment, make sure to obey the following items when repairing (or mending).

1. Do not damage or melt the tunicate of the leading wire on the AC1 side, including the power supply cord.
2. Do not soil or stain the letters on the spec. inscription plates, notice labels, fuse labels, etc.
3. When repairing the part extracted from the conducted side of the board pattern, fix it firmly with applying bond to the pattern and the part.
4. Restore the following items after repairing.
 - 1) Conditions of soldering of the wires (especially, the distance on the AC1 side).
 - 2) Conditions of wiring, bundling of wires, etc.
 - 3) Types of the wires.
 - 4) Attachment conditions of all types of the insulation.
5. After repairing, always measure the insulation resistance and perform the voltage-withstand test (See Fig-1).
 - 1) The insulation resistance must be 7.0 to 9.5 M Ω when applying 500V per second.
 - 2) In the voltage withstand test, apply 1.0 kV for 1 minute and check that the GO lamp lights.

- * Breaking current set to 10 mA.
- * Connect the safety checker as shown in Fig-1, then measure the resistance and perform the test.
- * Do not touch the equipment during testing.
- * For details of the safety checker, refer to the supplied Operation manual.

Insulation resistance: 7.0 to 9.5 M Ω (500 V/s)
Voltage-withstand: 1.0 kV for 1 minute.

Fig-1

When servicing and checking on the TV, note the followings.

1. Keep the notices.

As for the places which need special attentions, they are indicated with labels or seals on the cabinet, chassis and parts. Make sure to keep the indications and notices in the operation manual.
2. Avoid an electric shock.

There is a high voltage part inside. Avoid an electric shock while the electric current is flowing.
3. Use the designated parts.

The parts in this equipment have the specific characteristics of incombustibility and withstand voltage for safety.
Therefore, use a part which has the same character as the replaced part. Especially as to the important parts for safety which is indicated in the circuit diagram or the table of parts with a Δ mark, the designated parts must be used.
4. Put parts and wires in the original position after assembling or wiring.

There are parts which use the insulation material such as a tube or tape for safety, or which are assembled so that these parts do not make contact with the printed

- board. The inside wiring is designed not to get close to the pyrogenic parts and high voltage parts. Therefore, put these parts in the original positions.
5. Take care of the cathode-ray tube.

By setting an explosion-proof cathode-ray tube in this equipment, safety is secured against implosion. However, when removing it or servicing from the back, it gives out shock that is dangerous. Take enough care to deal with it.
6. Avoid an X-ray.

Safety is secured against an X-ray by giving considerations to the cathode-ray tube and the high voltage peripheral circuit, etc. Therefore, when repairing the high voltage peripheral circuit, use the designated parts and do not change the circuit. Repairing, except indicates, causes rising of high voltage, and the cathode-ray tube emits an X-ray.
7. Perform a safety check after servicing.

Confirm that the screws, parts and wiring which were removed in order to service are put in the original positions, or whether there are deteriorated portions around the places serviced.

SPECIFICATIONS

Tuner System	Frequency synthesized tuner
TV System	NTSC-M
Channel Coverage	VHF: 2 to 13 UHF: 14 to 69 CATV: 5A, A-1 to A-5, A to W, W+1 to W+84
Program Memory	181
Antenna Input	75 ohms, unbalanced
Picture Tube	20"
Screen Size	404 (W) x 303 (H) mm (16 x 12 in.) 480 mm (Visible diagonal) (19 in.)
Video Input	1 Vp-p 75 ohms
Audio Input	0.5 Vrms., 33 k ohms more
Speaker	120 x 60 mm (4 ³ / ₄ x 2 ³ / ₈ in.)
Operating Voltage	110 - 240 V, 50/60 Hz
Power Consumption	105 W
Phone Jack	Stereo-mini jack
Operating Temperature	5°C - 40°C
Operation Humidity	35% - 80%
Dimensions	610 (W) x 440 (H) x 483 (D) mm (24 ¹ / ₈ x 17 ³ / ₈ x 19 ¹ / ₈ in.)
Weight	19.5 kg (42.9 lbs.)

- Design and specifications are subject to change without notice.

DISASSEMBLY INSTRUCTIONS

1. REAR CABINET REMOVAL

- (1) Remove four screws ① and three screws ②, then remove the rear cabinet in the direction of the arrow. (See Figure 1-1)

Figure 1-1

2. HIGH-VOLTAGE CAP (ANODE CAP) REMOVAL

2-1. Cautions before Removing

Discharge the anode voltage

- (1) The anode voltage is not discharged completely from the CRT of this unit even after the power is turned off. Be sure to discharge the residual anode voltage before removing the anode cap.

Do not use pliers

- (2) Do not use pliers, etc. to remove the anode cap. If you used pliers and bent the hook to remove the cap, the spring characteristics of the hook could be lost, and when reinstalled, the cap would come off from the CRT anode button easily, causing an accident.

Do not turn the anode cap

- (3) If the anode cap is turned in the direction of its circumference, the hook is likely to come off.

Figure 2-1

2-2. Anode Cap Removal

Discharge the anode voltage. (See Figure 2-1)

- (1) Connect a flat-bladed screwdriver to the CRT GND via an alligator clip.
- (2) Use a tester to check the end of the screwdriver and ground of the TV for continuity.
- (3) Touch the hook with the end of the screwdriver.
- (4) Turn over the anode cap.

Caution : Be careful not to damage the anode cap.

Caution : Be careful not to damage the anode cap.

Figure 2-2

- (5) Push the anode cap with your thumb in the direction of arrow ① as shown in the figure, then lift the cap in the direction of arrow ② to release the hook on one side. (See Figure 2-3)

Figure 2-3

- (6) Turn over the anode cap on the side where the hook was released and pull out the cap in the direction opposite to that on which the cap was pushed. (See Figure 2-4)

Caution : Do not pull out the anode cap straight up.
: Do not pull the cap forcibly. After removing the cap, check that the hook is not deformed.

Figure 2-4

3. ANODE CAP REINSTALLTION

Observe the cautions carefully so that no accident occurs due to a defect in installing the anode cap and so it does not come off.

3-1. Caution before Reinstalling

Never turn the anode cap after installing it

Never re-use the hook when it has been deformed

- (1) If the anode cap is turned after it is installed, it may come off. Therefore, arrange the high-voltage cable before attaching the anode cap. (See Figure 3-1)
- (2) If you have attached the anode cap before arranging the high-voltage cable, arrange the cable carefully so the cap does not turn.

Figure 3-1

3-2. Anode cap reinstallation

- (1) Use a clean cloth moistened slightly with alcohol to clean the installation section. (See Figure 3-2)

Caution : Check that the installation section is free from dust, foreign matter, etc.

- (2) Coat the anode cap installation circumference with an appropriate amount of the specified silicone grease (KS-650N).

Caution : Be careful that silicone grease does not enter the anode button.

Figure 3-2

- (3) Eliminate twisting, etc. of the high-voltage cable and arrange it so that no twisting occurs. (See Figure 3-3)

Caution : If the cable is not arranged correctly, the anode cap could turn and cause an installation defect.

Figure 3-3

- (4) Turn over the rubber cap symmetrically on the left and right. (See Figure 3-4)

Caution : Take great care not to damage the anode cap.

Figure 3-4

- (5) Fit your forefinger over the projection at the center of the cap and hold the cap between your thumb and middle finger. (See Figure 3-5)

Figure 3-5

- (6) Apply the hook on one side to the anode button as shown on the figure. (See Figure 3-6)
Caution : Check that the hook is held securely.
- (7) Apply the hook on the other side to the anode button as shown in Figure 3-7.

Figure 3-6

Figure 3-7

- (8) Pull the anode cap slightly with the rubber cap turned over and visually check that the hook is engaged securely.
- (9) Release your hand from the rubber cap of the anode cap.
Caution : Cover the anode cap so that it does not lift.
- (10) Hold the skirt of the anode cap slightly to improve the close contact between the cap and CRT.
- (11) Check that the anode cap is in close contact with the CRT. (See Figure 3-8)

Figure 3-8

4. NK C.B REMOVAL

- (1) Disconnect CN903 (CRT GND).
- (2) Disconnect CN901, CN902.
- (3) Pul out the NK C.B. in the direction of arrow.
(See Figure 4)

Figure 4

5. MAIN C.B REMOVAL

- (1) Disconnect CNA401, CN601 and CN802.
- (2) Pull out the Main C.B. in the direction of the arrow.
(See Figure 5)

Figure 5

IC DESCRIPTION
IC, M37272M8-165SP

Pin No.	Pin Name	I/O	Description												
1	$\overline{\text{HD}}$	I	OSD horizontal synchronised signal input terminal. "L"= active.												
2	$\overline{\text{VD}}$	I	OSD vertical synchronised signal input terminal. "L"= active.												
3	A MUTE	O	Used to mute line out sound and picture when no input signal is detected. "H" to mute.												
4	L MUTE														
5	A DET OUT	O	Not used.												
6	SW/SBASS	O	SBASS ON "L", OFF "H".												
7	SEL1	O	Selecting tuner receiving band. <table><tr><td></td><td>Pin 7</td><td>Pin 8</td></tr><tr><td>TUNER</td><td>L</td><td>L</td></tr><tr><td>VIDEO 1</td><td>L</td><td>H</td></tr><tr><td>VIDEO 2</td><td>H</td><td>L</td></tr></table> Reset start : Both of Pin 7, Pin 8 are "H".		Pin 7	Pin 8	TUNER	L	L	VIDEO 1	L	H	VIDEO 2	H	L
	Pin 7	Pin 8													
TUNER	L	L													
VIDEO 1	L	H													
VIDEO 2	H	L													
8	SEL2	O													
9	SP MUTE	O													
10	$\overline{\text{REMOCON}}$	I	Used to mute the speaker (sound) output.												
11	$\overline{\text{SD}}$	I	Remote control signal is led to this pin.												
12	$\overline{\text{EXT}}$	I	Horizontal sync. detected input. The level of this pin will be sampled by μ -P to determine whether there is picture signal detected.												
13	PON	O	I ² C switching.												
14	A VCC	–	During standby mode, "H" level is inserted to switch off horizontal deflection and high voltage.												
15	HLF	–	5V supply.												
16	V HOLD	–	Connected to filter.												
17	CV IN	I	Connected to condensor.												
18	CNVSS	–	Video signal input.												
19	XIN	I	Connected to ground.												
20	XOUT	O	8 MHz clock input.												
21	VSS	–	8 MHz clock output.												
22	VCC	–	Connected to ground.												
23	BBE 1	O	5 V supply.												
24	BBE 2	O													
25	$\overline{\text{RST}}$	I	<table><tr><td></td><td>Pin 23</td><td>Pin 24</td></tr><tr><td>OFF</td><td>L</td><td>L</td></tr><tr><td>LOW</td><td>H</td><td>L</td></tr><tr><td>HIGH</td><td>H</td><td>H</td></tr></table>		Pin 23	Pin 24	OFF	L	L	LOW	H	L	HIGH	H	H
	Pin 23	Pin 24													
OFF	L	L													
LOW	H	L													
HIGH	H	H													
26	D DET A	I													
27	D DET F	I	Used to reset the μ -P when power up.												
28	D DET R														
29	AFTV	I	Connected to ground through a resistor.												
30	KEY	I	Fault detection. Detect as a fault when the voltage is more than 2.5V.												
31	SDA2	I/O	AFT voltage from IC301 is received by μ -P during channel tuning.												
32	SDA1	I/O													
33	SCL2	I/O	Input key is detected by monitor.												
34	SCL1	I/O	I ² C bus CH2 data.												

Pin No.	Pin Name	I/O	Description
35	S OUT	O	Not used.
36	QSUR	O	Surround ON "H", OFF "L".
37	$\overline{\text{LED}}$	O	LED ON "L", OFF "H".
38	WP	O	E ² PROM write protect.
39	FAST BLK	O	OSD blanking output.
40	B	O	OSD blue output.
41	G	O	OSD green output.
42	R	O	OSD red output.

IC, TA1268N

Pin No.	Pin Name	I/O	Description
1	NC	–	Not connected.
2	AUDIO OUT	O	Sound output. The maximum flew out current is 3.6mA. So, the minimum load resistor is 1k Ω . (Not used)
3	RF AGC	O	RF AGC output.
4	SIF TANK	–	Tank coil connection for SIF detection circuit.
5	AGC FILT	–	PIF 2nd AGC filter.
6	PIF GND	–	GND for PIF circuit.
7 ~ 8	PIF IN	I	IF input. The typical input value is 90dB μ V.
9	PIF VCC	–	VCC for PIF circuit.
10	LOOP FILT	–	PIF PLL loop filter.
11	APC FILT	–	APC filter of f _{sc} oscillation.
12	VCXO	I	X'tal of 3.58MHz VCXO.
13	GND	–	V/C/D GND.
14	FAST BLANKING	I	Fast blanking of RGB input.
15	R IN	I	R signal input.
16	G IN	I	G signal input.
17	B IN	I	B signal input.
18	D VCC	–	VCC for digital circuit.
19	R OUT	O	R primary color signal output.
20	G OUT	O	G primary color signal output.
21	B OUT	O	B primary color signal output.
22	V OUT	O	Vertical pulse output.
23	NFB	I	NFB input.
24	V RAMP	O	Vertical ramp output.
25	V SEPA FILT	–	Vertical sync. separation filter.
26	H VCC	–	VCC for horizontal circuit.

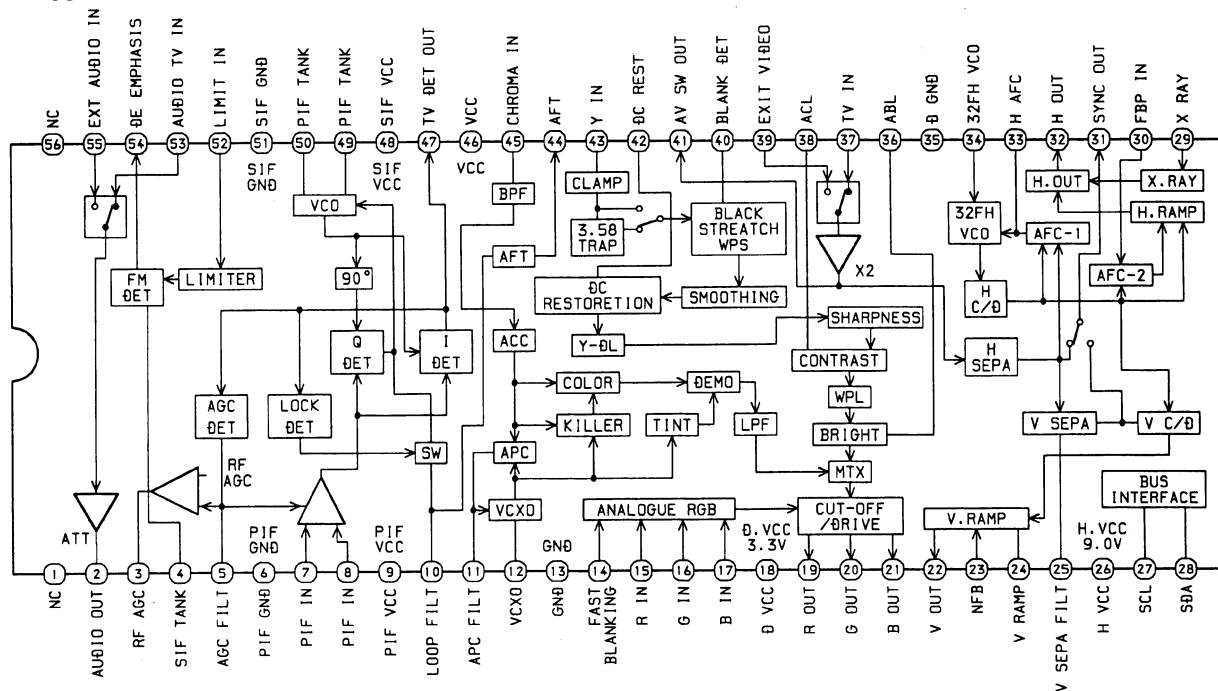

Pin No.	Pin Name	I/O	Description															
27 ~ 28	SCL, SDA	I/O	Input and output of I ² C Bus.															
29	X RAY	I	Inputting of X-RAY protect circuit. The threshold voltage is 3.5V (typ.). If the voltage that is applied is more than the threshold voltage, the X-RAY protect circuit make horizontal output a low.															
30	FBP IN	I	Fly-back pulse input. The Fly-back pulse is the reference of AFC circuit, gate pulse and so on. The current needs to keep under 1mA.															
31	SYNC OUT	O	Sync. pulse output.															
32	H OUT	O	Horizontal pulse output.															
33	H AFC	–	Horizontal AFC filter. The AFC circuit fits the phase between inputted horizontal sync. signal and horizontal pulse which is made by countdowning 32f _H .															
34	32FH VCO	–	Ceramic oscillator connection. That constitutes 32f _H (503kHz) oscillation circuit.															
35	D GND	–	GND for digital circuit.															
36	ABL	O	ABL circuit.															
37	TV IN	I	Inputting of PIF detected signal. The typical input amplitude is 1.0Vp-p.															
38	ACL	O	ACL circuit.															
39	EXT VIDEO	I	Inputting of external video signal.															
40	BLANK DET	–	Filtering of black peak detection.															
41	AV SW OUT	O	Video switch output which selects TV signal or external video. Amp gain: Min. 1.7, Typ. 1.9, Max. 2.1.															
42	DC REST	I	Filtering of APL detection.															
43	Y IN	I	Y signal input. The typical input amplitude is 1.0Vp-p.															
44	AFT	O	AFT output. Monitor signal output can be selected via Bus. <table border="1"><tr><td>B0</td><td>B1</td><td>OUTPUT</td></tr><tr><td>0</td><td>0</td><td>AFT</td></tr><tr><td>0</td><td>1</td><td>TEST purpose only</td></tr><tr><td>1</td><td>0</td><td>B</td></tr><tr><td>1</td><td>1</td><td>(RF AGC)/2</td></tr></table>	B0	B1	OUTPUT	0	0	AFT	0	1	TEST purpose only	1	0	B	1	1	(RF AGC)/2

SET-UP FOR ADJUSTMENT

Because the video signal output from a pattern generator is used as the adjustment signal input during adjustment, the video signal output from the pattern generator must conform with the specifications. Measure the output waveform across 75 Ω load. Confirm that the synchronizing signal has an amplitude of about 0.3 V, the video signal portion has an amplitude of about 0.7 V and the burst signal has an amplitude of about 0.3 V with flat envelope. Confirm that ratio of the burst signal amplitude and the red signal amplitude is 0.30 : 0.66. If the output signal does not conform with the specifications, calibrate the pattern generator. (Refer to pattern generator operation manual.)
Use the LEADER: LCG 404 for the pattern generator.

Precautions before starting adjustment

Satisfy the following setting conditions before starting adjustment.

- Allow warm-up of 20 minutes or longer. (Do not turn off during warm-up.)
- Set all picture quality controls of users' setting to initial set-up, unless otherwise specified.
- Picture quality reset
 1. Select "Picture" on the screen menu and press enter button.
 2. Select "Normal" and press enter button.
 3. Select "Reset" and press enter button.
- Set the pattern generator's output level to 1.0Vp-p (across 75 Ω load).

1. CRT ADJUSTMENT

1-1. Precautions

- (1) Receive the white raster signal, and then perform aging for at least 20 minutes.
- (2) Demagnetize the area surrounding the CRT with a degausser before making adjustments.
- (3) Set the picture quality for each mode to the factory setting.
- (4) Position the front screen facing the east as much as possible.

1-2. Purpose

- (1) Beam landing adjustment (purity magnet)
Set the left/right balance of beam landing. If there is a discrepancy in this adjustment, a color irregularity will occur. After completion of the landing adjustment, it is necessary to perform convergence adjustment.

Fig. 1-1

- (2) Beam convergence adjustment (4-pole magnet)

Align the R beam with the B beam. The G beam does not move with this adjustment.

Align the R beam with the B beam

Fig. 1-2

- (3) Beam convergence adjustment (6-pole magnet)

With a 4-pole magnet align the G beam with the already aligned R/B beam.

Align the G beam with the R/B beam

Fig. 1-3

- (4) The composition of each magnet is as shown in Fig. 1-4.
In making adjustments, rotate the lock ring clockwise (looking from the CRT's back screen) and disengage.
Be careful not to loose the lock ring too much. If the magnet assembly has become shifted during adjustments, secure it to the position in Fig. 1-4.

Fig 1-4

1-3. Beam Landing Adjustment

- (1) Receive the green raster signal from the pattern generator.
- (2) Loosen the magnet lock screw, and shift the magnet assembly backward (toward the neck).
- (3) Loosen the DY lock screw, and shift the DY deflecting yoke backward (toward the neck).
- (4) After opening the two purity magnets to the same angle, adjust the color width of the bands on both sides of the screen so that they are equal. (refer to Fig. 1-5 (a)).

Fig 1-5 (a)

As shown in Fig. 1-5 (b), the purity magnet functions in relation to the electron beam.

- (5) Gradually shift the deflecting yoke toward the front (toward the CRT funnel). Stop movement at the point when the screen has become completely green.

Fig 1-5 (b)

- (6) Also, verify the respective monochromatics of red and blue.
- (7) While looking at the screen, adjust the tilt of the deflecting yoke and tighten the DY lock screw.
- (8) Shift the magnet assembly to the front (toward the CRT funnel), stop movement before the adjustment position and then tighten the magnet lock screw.
At this time, be careful not to shift the position of the purity magnet.

As there is occurrence of convergence distortion after completing the landing adjustments, be sure to carry out convergence adjustments.

If the color irregularities in the screen's corner section are not improved, correct them with the landing magnet. After using the landing magnet, be sure to demagnetize the CRT with degausser and verify that there is no occurrence of color irregularity. (refer to Fig. 1-6)

Landing magnet: 81-JTI-710-010
(two-sided adhesive tape) : 80-XVI-218-010 Cushion

Fig 1-6

1-4. Beam Center Convergence Adjustment

Make adjustments on the convergence with 4-pole and 6-pole magnets. Operate each magnet in relation to the electron beam as shown in Figs. 1-7 and 1-8. When performing this adjustment, verify whether there is distortion in the focus adjustment. If necessary, carry out adjustments again.

Fig 1-7

In Fig. 1-7, two 4-pole magnets are stacked together so as to be of the same polarity. Move the B and R beams to their respective direction, by rotating the two 4-pole magnets together. By adjusting the opening of the two magnets, it is possible to adjust the amount of the beam's movement.

Fig 1-8

In Fig. 1-8, the two 6-pole magnets are stacked together so as to be of the same polarity. Move the B and R beams to their respective direction, by rotating the two 6-pole magnets together. By adjusting the opening of the two magnets, it is possible to adjust the amount of the beam's movement.

- (1) Receive the dot pattern signal from the pattern generator.
- (2) Pay attention to the center of the screen, and perform adjustments with two 4-pole magnets so that the R beam and B beam are perfectly aligned and become a magenta color. (Refer to Fig. 1-2)
- (3) In the same way, pay attention to the screen, and perform adjustments with a 6-pole magnet so that the magenta beam and G beam are aligned and become a white dot. (Refer to Fig. 1-3)
- (4) After adjustments are completed, secure all magnets with the lock link. (Refer to Fig. 1-4)

1-5. The Surrounding Convergence Adjustment

Perform this adjustment after completion of adjustment 1-4.

- (1) Shake the deflecting yoke up, down to the right and left, and adjust any discrepancies in the screen's surroundings.
- (2) Insert wedges in three locations in the gap between the deflecting yoke and the surface of the CRT funnel in order to secure the deflecting yoke. (Refer to Fig. 1-9)

Fig. 1-9

IC BUS Data Setting Procedure

With this model, most parts of video and deflection blocks can be adjusted using a jig remote control.

Preparations:

- Modify the hidden keys on the RC-6VT06 jig remote control (TV-C142/86-LB4-951-010) so that they can easily be pressed.

2 keys to be modified (see the figure below):

Starting service mode:

Hidden key TEST:

- Pressing the TEST key on the jig remote control once will set the unit to the aging mode. See Fig. 1.
- Pressing TEST again will set the unit to the adjustment mode.

Hidden key FINISH:

- Pressing the FINISH key on the jig remote control will reset the accumulated hours in the aging mode.
- Do not press FINISH during normal servicing.

Aging mode operation method: Be sure to check this after replacing EEPROM.

1. Press the TEST key on the remote control to set to the aging mode. See Fig. 1.
2. Press the SYSTEM key to check the status of distinction switch. See Fig. 2.
 - If the contents are different, press the "1" key to select "IN-ST" for destination.
 - To modify the data, use the channel keys to move the cursor to 0-F, and then use the volume keys to change it to "0" or "1".

Fig. 2

Contents of aging mode:

1. Releasing auto power off function
Release the auto power off function when no input is supplied.
Use this mode for warming up (aging) during CRT adjustment.
2. AFT S-curve status display
OK, UP or DN (down) will appear to show whether the AFT S-curve status is optimum, too high or too low.

3. CRT ON accumulated hour display

The CRT usage hours accumulate every hour, and are displayed using hexadecimal number.

Example of calculating displayed hexadecimal number:

AFT OK 1234H IN-ST

* When the accumulated hours exceed 7FFFH (32,768 hours), the display will be reset to 0000H.

Adjustment mode operation method:

1. Press the SYSTEM key to restore the aging display, and press the TEST key again to display the adjustment menu.

White Balance Adjustment:

Adjustment menu screen PAGES 2-1~5

* When the adjustment menu screen appears, the user picture quality will be cleared.

Input signal: White raster

Details of adjustment:

1. R CUT OFF
2. G CUT OFF
3. B CUT OFF
4. G DRIVE
5. B DRIVE

* Perform aging for at least 20 minutes before adjustment.

* Repeat all processes of adjustment several times.

Measuring instrument: Leader LCG-404 pattern generator

Fig. 2-1

Cutoff adjustment:

- 2-1. Use the pattern generator to input white raster signal.
- 2-2. Fix the cutoff value whose color seems to be most intense at 127, and use the volume keys on the jig remote control to adjust the other two cutoff values so that a white picture appears.

Drive adjustment:

- 2-3. Use the volume keys on the jig remote control to increase the 4. G DRIVE value to 200 or more so that the picture is greenish.
- 2-4. Decrease the value gradually until green disappears.
- 2-5. Use the volume keys on the jig remote control to increase the 5. B DRIVE value to 200 or more so that the picture is bluish.
- 2-6. Decrease the value gradually until blue disappears.
- 2-7. Perform steps 1-6 several times so that a white picture appears.

Focus Adjustment:

Input signal: Dot signal

Adjustment point: Upper SFR of FBT (T601)

Measuring instrument: Leader LCG-404 pattern generator

- Adjust the upper SFR of FBT (T601) until the focus of dots in the dot pattern is optimum.

Screen Adjustment:

Input signal: No signal (raster)

Adjustment point: Lower SFR of FBT (T601)

Measuring instrument: Leader LCG-404 pattern generator

1. Use the jig remote control to display the adjustment menu screen.
2. Press the "0" channel numeric key so that a horizontal single line appears. Fig. 2-2
3. Adjust the lower SFR of FBT (T601) until the horizontal single line starts to gleam.
4. Perform step (2) again to return to the adjustment menu screen.

Fig. 2-2

- 3-1. **SUB BRIGHT** Sub-brightness adjustment / Adjustment menu screen PAGE 3-2 (make sure of the order)

Input signal: Color bar (stairstep)

Measuring instrument: Leader LCG-404 pattern generator

1. Use the volume keys on the jig remote control to adjust until the second step from the right gleams.

Fig. 3-1

- 3-2. **SUB CONTRAST** Sub-brightness adjustment / Adjustment menu screen PAGE 3-1

Input signal: Color bar (QIW) with chroma off

Measuring instruments: Oscilloscope

Leader LCG-404 pattern generator

Test point: TP902 on NK C.B.

1. Connect the oscilloscope to TP902.
2. Use the volume keys on the jig remote control to adjust so that the voltage to the pedestal level from 100% white is 80 ± 2.0 V, referring to Fig. 3-2.

Fig. 3-2

- 3-3. **SUB TINT** Sub-tint adjustment/Adjustment menu screen PAGE 3-3

Input signal: Color bar

VIDEO IN

Measuring instruments: Oscilloscope

Leader LCG-404 pattern generator

Test point: TP302/BT301 (wire connector) pin (3)

1. Connect the oscilloscope to TP302.
2. Use the volume keys on the jig remote control to adjust so that the bottom edges of waveform are in one oblique line, referring to Fig. 3-3.

Fig. 3-3

- 3-4. **SUB COLOR** Sub-color adjustment/Adjustment menu screen PAGE 3-4

Input signal: Color bar

VIDEO IN

Measuring instruments: Oscilloscope

Leader LCG-401 pattern generator

Test point: TP302/BT301 (wire connector) pin (3)

1. Connect the oscilloscope to TP302.
2. Use the volume keys on the jig remote control to adjust so that the peaks of waveform are in one straight line, referring to Fig. 3-4.

Fig. 3-4

4. **TV SETTING CHECK** Settings check for different models/
Adjustment menu screen PAGES 4-1~4
The settings are fixed for each model: Do not change the settings to those other than specified.
• Check to see if the settings on the adjustment menu screen are the same as in Table 4.
If the settings are different, use the volume keys on the jig remote control to reset them.

3.58 TRAP	0: ON
BPF	2: AUTO
H AFC	1: +1
WPL	0: OFF

* The 3.58 TRAP setting cannot be modified.

Table 4

Check is possible even with a list of menus.

Fig. 4

Tuner Adjustment:

If adjustment element has been replaced as a result of repair, perform the following adjustments, and then proceed with adjustment using the adjustment menu screens.

If this adjustment is not complete, correct adjustment will not be possible with adjustment menu screens.

Components which cause the circuit status to change after repair:

- VCO coil
- SIF coil
- TRAP coil
- SEPARATION VR

- 5-1. **VCO ADJUSTMENT** VCO (PIF) adjustment/Video carrier frequency free-running adjustment

Input signal: RF-NTSC color bar:

Input level: 90 dBμV

BROADCAST CH/fc=45.75MHz

Mode: TUNER

Test points: Input: TP-102 **IF** (TU101 pin 11)

Output: TP-201 **AFT** (IC301 pin 44)

Adjustment point: L205/P-IF

Measuring instruments: Oscilloscope

Leader LCG-404 pattern generator

1. Connect the oscilloscope to TP-201.
2. Supply a specified level RF signal to TP-102, and adjust L205 so that the voltage at TP-201 is 2.8 ± 0.3 V DC.

- 5-2 **SIF ADJUSTMENT** Audio IF modulation adjustment

Input signal: AM/FM-SG RF OUT: 4.5MHz

MODE OFF

90 dBμV

With the simple adjustment method, receive an ordinary broadcast signal with simple adjustment.

Mode: TUNER

Test points: Input/TP-202: IC301 pin 52

Output/TP-203: IC301 pin 54

Adjustment point: L201/S-IF

Measuring instruments: Oscilloscope

AM/FM signal generator

1. Connect the oscilloscope to TP-203.
2. Tune in TV channel 2.
3. Supply a specified signal to TP-202, and adjust L201 so that the voltage at TP-203 is 4.5 ± 0.2 V DC.

Fig.5-1

This exploded view diagram illustrates the assembly of a car stereo unit. The components are labeled as follows:

- 1**: Front faceplate with buttons and display.
- 2**: Mounting bracket for the faceplate.
- 3**: Small mounting pin or clip.
- 4**: Another small mounting pin or clip.
- 5**: Main stereo unit housing.
- 6**: Side panel or trim piece.
- 7**: Speaker grille or cover.
- 8**: Cable or connector for the speaker.
- 9**: Internal wiring harness or connector.
- 10**: Rear panel or mounting plate.
- 11**: Mounting bracket for the rear panel.
- 12**: Another mounting bracket or clip.
- 13**: Side panel or trim piece.
- 14**: Top panel or trim piece.
- 15**: Internal component, possibly a tuner or amplifier module.
- 16**: Antenna cable or connector.
- 17**: PCB (Printed Circuit Board) with various electronic components.
- 18**: Cable or connector for the PCB.
- 19**: Small electronic component or connector.
- A**, **B**, **C**, **D**, **E**, **F**, **G**, **H**: Various mounting points, clips, and alignment markers indicated by dashed lines.
